                                                              밁
                                                                                                                                                                                                                   The invention relates to a method of detecting the presence of a target CC CS 198 polynucleotide comprising contacting the test sample with at least CC one CS 198-specific polynucleotide. The method is useful for detecting CC diseases of the gastrointestinal (GI) tract organs, particularly cancer. CC reating, diagnosing, staging, monitoring, prognosticating, preventing, cc treating or determining predisposition to disease and conditions of the CC GI tract such as cancer, gastric ulcer, gastritis, Crohn's disease, CC ulcerative colitis, pancreatitis and Barret's oesophagus. The CS 198 cc polypeptides are useful as standards or reagents in diagnostic cc immunoassays, as components or as target sites for various therapies. CC Antibodies directed against at least one epitope contained within these colypeptides are useful as delivery agents for therapeutic agents, in CC diagnostic tests and for screening for conditions or diseases associated with CS 198, particularly cancer. Monoclonal antibodies may also be used CC with CS 198, particularly cancer antibodies for therapeutic use. The CS 198 colypucleotide is also useful in gene therapy and drug screening. The CC method of the invention provides an alternative, non-surgical diagnostic cc method capable of detecting early stage GI tract disease such as cancer. The present sequence is human CS 198 polypeptide

the presence of a target CS198 polynucleotide in a test sample contacting the sample with a CS198 specific polynucleotide and the presence of the target CS198 polynucleotide in the test

67pp; English

The invention describes a method of detecting the presence of a target CS198 polynucleotide in a test sample. The method comprises contacting the test sample with at least one CS198 specific polynucleotide or its complement, and detecting the presence of the target CS198 polynucleotide in the test sample, where the CS198-specific polynucleotide has at least 50% identity to a polynucleotide having any of the 27 fully defined sequences of 34-2894 bp (S1-27) given in the specification, or their fragments or complements. The composition and methods are useful in diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition of an individual to, diseases and conditions of the gastrointestinal tract, e.g. cancer and in gene therapy. This is the predicted amino acid sequence of the human CS198 protein derived from the CS198 consensus sequence shown in seq id 27.

                                                                                                                                                                         The invention relates to reagents and methods for detecting diseases of the gastrointestinal (GI) tract. The method involves detecting the presence of target CS198 polynucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CS198 polypeptide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The present sequence is a CS198 protein used to illustrate the method of the
                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                               Claim 17;
                                                                                                                                                                                                                                                                                                                                           Diagnosing diseases such as cancer of the gastrointestinal tract, detecting aberrant expression or activity of the CS198 polypeptid associated treatment methods.
                                                                                                                                                                                                                                                                                                                                                                                                     GENBANK;

CC treatment of pancreatic cancer, using a substance that inhibits or binds controlled to the protein or its DNA, including: an antisense oligonucleotide, short correctly controlled to the protein or its DNA, including: an antisense oligonucleotide, short correctly an entered against the pancreatic protein, an expectably appreciably an entered to the pancreatic protein, an expectably having a molecular weight below 5000, and the controlled to the pancreatic DNA, an aptamer or compound. Intibody, preferably human or humanized, that binds to the gancreatic DNA, or an anti-idiotypic antibody raised against the compound. Immunostimulant and/or radioisotope. The novel group, cyrotoxic compound, immunostimulant and/or radioisotope. The novel compound, immunostimulant and/or radioisotope. The novel condon pancreatic proteins and their encoding DNA have cytostatic condons of the inverse and proteins associated with pancreatic condons of the invention. Note: This sequence is not shown in the conscision of the invention. Note: This sequence is not shown in the pancreatic condons of the invention. Note: This sequence is not shown in the conscision of the invention. Note: This sequence is not shown in the conscision of the invention. Note: This sequence is not shown in the protein sequence with this specification by the European Patent Office.

                                                                                                    The invention relates to polynucleotides (AAKS1456-AAKS3435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; cytokine; cell proliferation; cell differentiation; gene th vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tang
Ma Y,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human protein

```

The invention relates to polynucleotides (AAKS1456-AAKS3435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cycokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication ç

                                                                                                                                                                                                                                                                                                                                                                                                                                                          coding sequences (ADG14340-ADG14345). The coding sequences are useful for detecting and screening proliferative insulin-producing cells as well as differentiation and proliferation of such cells and their precursors as analogous cells in treatment of e.g. PHHI and diseases due to differentiation proliferation abnormality, diseases of the nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Niwa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; NC1; NC2 neuroprotective

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ADG14341 standard; protein; 679
                                                                                                                                                                                                                                                                                                                       and pancreas. The coding sequences are also useful as spontaneous proliferation models of pancreas beta-cells. The novel genes NC1, NC2 NC3 were isolated from the pancreas of PHHI patients, which were used testing for the detection of proliferative insulin-producing cells or pancreas beta-cells by Northern analysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pamilial persistent hyperinsulinemic hypoglycemia of infancy patient-expressed genes for detecting and screening e.g. prolinsulin-producing cells in treatment of PHHI.

                                                                                       is used in a method to detect the presence of a target CS198 polynucleotide in a test sample. The CS198 gene is useful as a marker for gastrointestinal (GI) tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition to diseases and conditions of the GI tract, such as GI tract cancer, Barraet's oesophagus, gastric ulcer, gastritis, leiomyoma, polyps, Crohn's disease, ulcerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAW79681;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAW79681

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
The invention relates to a method of detecting the presence of a target CS 198 polynucleotide comprising contacting the test sample with at least one CS 198-specific polynucleotide. The method is useful for detecting diseases of the gastrointestinal (GI) tract organs, particularly cancer. The CS 198 polynucleotides, polypeptides and antibodies are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing, treating or determining predisposition to diseases and conditions of the GI tract such as cancer, gastric ulcer. gastriting from a target
                                                                                                                                                                                                                                                                        Detecting the presence of target CS: detecting or diagnosing diseases of contacting test sample with at least

The CS 198 polypeptides are useful as standards or resquents in diagnostic immunoassays, as components or as target sites for various therapies. Antibodies directed against at least one epitope contained within these polypeptides are useful as delivery agents for therapautic agents, in diagnostic tests and for screening for conditions or diseases associated with CS 198, particularly cancer. Monoclonal antibodies may also be used for the generation of chimeric antibodies for therapeutic use. The CS 198 polymucleotide is also useful in gene therapy and drug screening. The method capable of detecting early stage GI tract disease such as cancer. The present sequence is C-terminal portion of human CS 198 polypeptide

The method comprises contacting the test sample with at least one CSi98 specific polynucleotide or its complement, and detecting the presence of the target CSi98 polynucleotide in the test sample, where the CSi98-specific polynucleotide has at least 50% identity to a polynucleotide having any of the 27 fully defined sequences of 34-2894 bp (Si-27) given in the specification, or their fragments or complements. The composition and methods are useful in diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition of an individual to, diseases and conditions of the gastrointestinal tract, e.g. cancer and in gene therapy. This is the amino acid sequence of a synthetic peptide based on the predicted human CSi98 protein sequence derived from the CSi98
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention

The method involves detecting the presence of target CS198 polynucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CS198 polypeptide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The present sequence is a CS198 protein used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Diagnosing diseases such as cancer of the gastrointestinal tract, by detecting aberrant expression or activity of the CS198 polypeptide, and

                                                                                                                                                                                                                                                                                   RESULT 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and treatment of diseases associated with inappropriate P expression. For caxample, N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For caxample, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention. N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at the olose, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922
                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The colon cancer antigens have cytostatic activity and can be used in gene therapy CC and treatment of diseases associated with inappropriate P expression. For CC example, N and P may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated P, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins or to CC can be used in the prevention, diagnosis and treatment of colorectal CC carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent CC pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 CC to 1052, 7921 and 7922
                                                                                                                                                                                                                                     밁

                                                                                                                                                                                                                                                                                                                                                                                                                The CS 198 polynucleotides, polypeptides and antibodies are useful for contenting, diagnosing, staging, monitoring, prognosticating, preventing, creating, or determining predisposition to diseases and conditions of the cS 198 polypeptides are useful as cancer, gastric ulcer, gastritis, Crohn's disease, cC ulcerative colitis, pancreatitis and Barret's oesophagus. The CS 198 polypeptides are useful as standards or reagents in diagnostic immunoassays, as components or as target sites for various therapies. CC Antibodies directed against at least one epitope contained within these cC polypeptides are useful as delivery agents for therapeutic agents, in CC polypeptides are useful as delivery agents for therapeutic agents, in CC polypeptides are useful as delivery agents for therapeutic agents, in CC polypeptides and for screening for conditions or diseases associated CC with CS 198, particularly cancer. Monoclonal antibodies may also be used CC polymucleotide is also useful in gene therapy and drug screening. The CC method of the invention provides an alternative, non-surgical diagnostic method capable of detecting early stage GI tract disease such as cancer. Consensus sequence is a peptide derived from human CS 198 polypeptide

                                                                                                                          The invention describes a method of detecting the presence of a target CS198 polynucleotide in a test sample. The method comprises contacting the test sample with at least one CS198 specific polynucleotide or its complement, and detecting the presence of the target CS198 polynucleotide in the test sample, where the CS198-specific polynucleotide has at least 50% identity to a polynucleotide having any of the 27 fully defined sequences of 34-2894 bp (S1-27) given in the specification, or their fragments or complements. The composition and methods are useful in diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition of an individual to, diseases and conditions of the gastrointestinal tract, e.g. cancer and in gene therapy. This is the amino acid sequence of a synthetic peptide based on the predicted human CS198 protein sequence derived from the CS198 consensus sequence shown in seq id 27.
                                                                                                                                                                                                                                                                                                                                                               Detecting the presence of a target CS198 polynucleotide in a test sample comprises contacting the sample with a CS198 specific polynucleotide and detecting the presence of the target CS198 polynucleotide in the test
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Billingel PA,

                                                                                                                                                                                                                                                                                                             The invention relates to reagents and methods for detecting diseases of the gastrointestinal (GI) tract. The method involves detecting the presence of target CS198 polynucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CS198 polypeptide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The present sequence is a CS198 peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 31-MAR-1997;

The CS198 gene is useful as a marker for gastrointestinal (GI) tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition to diseases and conditions of the GI tract, such as GI tract cancer, Barret's oesophagus, gastric ulcer, gastritis, leiomyoma, polyps, Crohn's disease, ulcerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New gastrointestinal polynucleotides, CS198, and their of developing products for the diagnosis and treatment gastrointestinal disorders, e.g. cancers, gastric ulcer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                SXCCCCCCCCCCCCCCCCXSXTTTTXXXXTHII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method of detecting the presence of a target CC CS 198 polynucleotide comprising contacting the test sample with at least one CS 198 specific polynucleotide. The method is useful for detecting CC diseases of the gastrointestinal (GI) tract organs, particularly cancer. CT The CS 198 polynucleotides, polypeptides and antibodies are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing, CC treating or determining predisposition to disease and conditions of the CG I tract such as cancer, gastric ulcer, gastritis, Crohn's disease, CC ulcerative colitis, pancreatitis and Barret's oseophagus. The CS 198 CC polypeptides are useful as standards or reagents in diagnostic immunoassays, as components or as target sites for various therapies. CC immunoassays, as components or as target sites for various therapies. CC immunoassays, as components or as target sites for various therapies. CC diagnostic tests and for screening for conditions or diseases associated CC with CS 198, particularly cancer. Monoclonal antibodies may also be used CC polypucleotide is also useful in gene therapy and drug screening. The CS 198 polypucleotide is also useful in gene therapy and drug screening. The CC method capable of detecting early stage GI tract disease such as cancer. Consensus seniorece is a peptide derived from human CS 198 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                       The invention describes a method of detecting the presence of a target CS198 polynucleotide in a test sample. The method comprises contacting the test sample with at least one CS198 specific polynucleotide or its complement, and detecting the presence of the target CS198 polynucleotide in the test sample, where the CS198-specific polynucleotide has at least 50% identity to a polynucleotide having any of the 27 fully defined sequences of 34-2894 bp (S1-27) given in the specification, or their fragments or complements. The composition and methods are useful in diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition of an individual to, diseases and conditions of the gastrointestinal tract, e.g. cancer and in gene therapy. This is the amino acid sequence of a synthetic peptide based on the predicted human CS198 protein sequence derived from the CS198 consensus sequence shown in seq id 27.
                                     CS198 peptide
                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Detecting the presence of a target CS198 polynucleotide in a test sample comprises contacting the sample with a CS198 specific polynucleotide and detecting the presence of the target CS198 polynucleotide in the test

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 35
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to reagents and methods for detecting diseases of the gastrointestinal (GI) tract. The method involves detecting the presence of target CS198 polynucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CS198 polypeptide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The prevention are useful as CS198 peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2004-313754/29.

The CS198 gene is useful as a marker for gastrointestinal (GI) tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, used in detecting, or determining the predisposition to disease and conditions of the GI tract, such as GI tract cancer, Barret's oesophagus, gastric ulcer, gastritis, leiomyoma, polyps, Crohn's disease, ulcerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New gastrointestinal polynucleotides, CS198, and their detection for developing products for the diagnosis and treatment of gastrointestinal disorders, e.g. cancers, gastric ulcer or gastri

                                                                                                                                                                                                                                                                                                                                                                                                                              문
                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method of detecting the presence of a target CC S198 molynucleotide comprising contacting the test sample with at least one CS 198-mpecific polynucleotide. The method is useful for detecting CC diseases of the gastrointestinal (GI) tract organs, particularly cancer. CC The CS 198 molynucleotides, polynoptides and antibodies are useful for detecting, disgnosing, staging, monitoring, promosticating, preventing, treating or determining predisposition to diseases and conditions of the CG Itract such as cancer, gastric ulcer gastritis, Crohn's disease, CC ulcerative colitis, pancrearitis and Barrer's oscophagus. The CS 198 pancrearitis and Barrer's oscophagus. The CS 198 CC polypeptides are useful as standards or reagents in diagnostic diseases, as components or as target sites for various therapies. CC immunoassays, as components or as target sites for various therapies. CC diagnostic tests and for screening for conditions or diseases associated CC with CS 198, particularly cancer. Monoclonal antibodies may also be used CC polypucities is also useful in gene therapy and drug screening. The CS 198 polypucitotide is also useful in gene therapy and drug screening. The CC method capable of detecting early stage GI tract disease such as cancer. The present sequence is a peptide derived from human CS 198 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                  Query Match
